SEA

Introduction

This screening report is tests whether or not the Broughton and Dalby Neighbourhood Development Plan requires a SEA (Strategic Environmental Assessment).

This exercise tests whether there are likely to be significant environmental effects arising from the policies in the draft NDP. An environmental assessment is a requirement of The Environmental Assessment of plans and Programmes Regulations 2004. The Authority has undertaken an assessment of the draft policies in the Pre-Submission document (6th February, 2017), and additional information forwarded to the Local Authority by the group, which contain the main land-use principles to be included in the final plan. Comments were invited from the Statutory consultation bodies on the conclusions contained in this report.

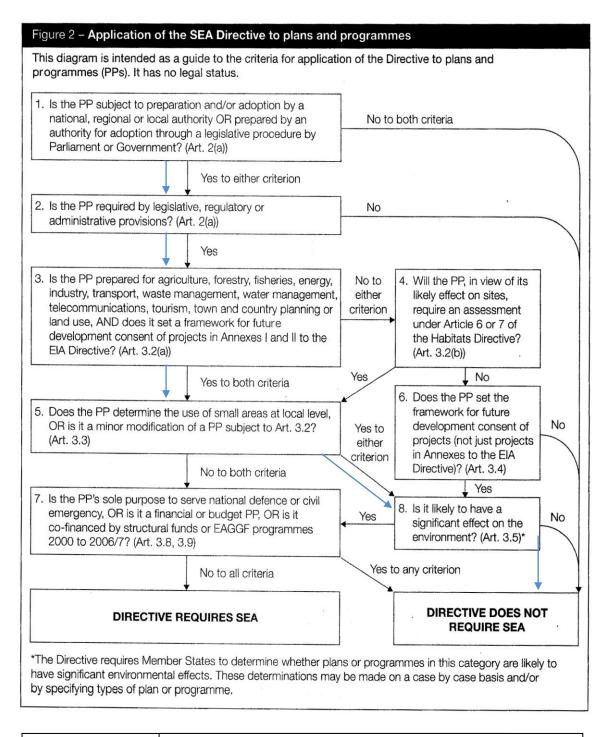

The Neighbourhood Development Plan sets the local planning policy framework for Broughton and Dalby Parish. When the Plan is 'made' by the local planning authority, it will become part of the Development Plan for Melton Borough and be used for the deciding of Planning Applications in the Parish, and in due course will be joined by the Melton Local Plan. Whilst the Neighbourhood Development Plan has been completed in advance of the Melton Local Plan, communications between the Council and the Neighbourhood Development Plan Group have ensured that the Neighbourhood Development Plan has been completed in general conformity with the emerging strategic policies in the Melton Local Plan.

The Neighbourhood Development Plan lists the following as its vision;

- 1. Maintain and enhance the vitality, unique identity and character of the distinct settlements.
- 2. Respect the heritage of our villages and environs by ensuring that any future plans for growth of population, the physical environment, sustainable energy and biodiversity are of a high quality, sensitively planned and ecologically sound.
- 3. Embrace innovation and inward investment in a proportionate and timely programme of mixed housing development, as well as the built environment for modest commercial growth in appropriate areas, both in line with the Melton Local Plan and national policies. Support and maintain at all times the cohesion and sustainable evolution of our communities, whilst protecting our countryside, green spaces and wildlife.
- 4. Maintain and develop community facilities, services, and an infrastructure and culture that meets community needs and enables a sense of unity and support for all, whilst enriching people's lives.
- 5. Maintain, protect and enhance our countryside, green spaces and wildlife.

6. Pursue and promote community safety in terms of traffic management and the design and maintenance of lighting, footways, highways and signage.
7. Encourage local businesses to align with the objectives in the neighbourhood plan. Support local businesses that have development needs that are in accordance with the neighbourhood plan in order to aid inward investment, sustain local employment, encourage local supply chains and increase local expenditure.

This report concludes, having regard to the location, nature and scale of the Broughton and Dalby Neighbourhood Development Plan, it is considered that the policies in the Plan will <u>not</u> have significant environmental effects. The rationale behind this conclusion is contained in the remainder of this report.

Broughton and Dalby Neighbourhood Development Plan

SEA Criteria

SEA Criterion	Yes/No (no other answer except Yes/No)	Explanation
Is the PP subject to preparation and/or adoption by a national, regional or local authority OR prepared by an authority for adoption through a legislative procedure by Parliament or Government (Regulation 3)	Yes	Neighbourhood Development Plans are prepared by Parish/Town Councils or designated Forums/Community Organisations. These are qualifying bodies under the Town and Country Planning Act as amended by the Localism Act 2011.
Is the PP required by legislative, regulatory or administrative provisions? (Regulation 3)	Yes	While there is no obligation on communities to create a Neighbourhood Development Plan, once they chose to do so it becomes part of the Statutory Development Plan.
Is the PP prepared for agriculture, forestry, fisheries, energy, industry, transport, waste management, water management, telecommunications, tourism, town and country planning or land use AND does it set a framework for future development consent of projects in Annexes I and II to the EIA Directive? (Regulation 4(2)(a))	Yes	Neighbourhood Development Plans can cover some of the topics identified in this list and they could set the framework for development of a scale that would fall under Annex II of the EIA Directive. However for Neighbourhood Development Plans, developments which fall under Annex I of the EIA Directive are "excluded development" as set out in Section 61k of the Town and Country Planning Act 1990 (as amended by the Localism Act 2011)

SEA Criterion	Yes/No	Explanation
	(no other	•
	answer	
	except	
	Yes/No)	
Will the PP, in view of its	No	The locations promoted for
likely effect on sites, require		development do not fall under
an assessment under Articles		any locations known by the
6 or 7 of the Habitats Directive?		Council to contain protected
(Regulation 4(2)(b))		species. We are now aware that the Broughton and Dalby
(1\egalation \(\frac{1}{2}\)(\(\frac{1}{2}\))		Neighbourhood Development
		Plan promotes one site, most
		of which has already secured
		planning permission.
		Moreover, the reminder of the
		site has gone through the
		same surveys ensuring
		effects on biodiversity, flood
		risk etc. are all acceptable
		and would not constitute significant impact.
Does the PP determine the	Yes	Neighbourhood Development
use of small areas at local	100	Plans by definition determine

		Evidence Base. As such, the

SEA Criterion	Yes/No (no other answer except Yes/No)	Council holds good information on the sites contained and holds no information that the sites would cause significant environmental harm if developed.
Is the PP's sole purpose to serve national defence or civil emergency	No	No to all criterions.
OR		
is it co-financed by structural funds or EAGGF programmes 2000 to 2006/7		
OR		
Is it a financial or budget PP?		

Likely Significance of Effects on the Environment

Criteria for determining the likely significance of effects on the environment	Likely to have significant environment al effects? Yes/No (no other answer except Yes/No)	Summary of significant environmental effects (negative and positive)
the degree to which the PP sets a framework for projects and other activities, either with regard to the location, nature, size and operating conditions or by allocating resources	No	The Broughton and Dalby Neighbourhood Development Plan looks to allocate a modest amount of housing and support existing services and facilities. This level of growth will have a small impact on the Environment, as will most development, however not large enough to be classed as significant.
the degree to which the PP influences other plans and programmes including those in a hierarchy	No	There has been much communication between the Neighbourhood Development Plan Group and the Borough Council to ensure that the Broughton and Dalby Neighbourhood Development Plan and the Emerging Melton Local Plan are in broad conformity. A Neighbourhood Development Plan is influenced by Local and National Policy, not the other way round.
the relevance of the PP for the integration of environmental considerations in particular with a view to promoting sustainable development	No	Whilst the Broughton and Dalby Neighbourhood Development Plan does seek to deliver sustainable growth, it also looks at policies relevant to the environment to ensure that there is an integrated approach to both development and the environment.
environmental problems relevant to the PP	No	None known.
the relevance of the PP for	No	This PP does not look at the

the implementation of Community legislation on the environment (e.g. PPs linked to waste management or water protection		management of waste or other such issues. These will be handled by Borough/County led PPs and thus out of the remit of the Broughton and Dalby Neighbourhood Development Plan.
the probability, duration, frequency and reversibility of the effects	No	The Broughton and Dalby Neighbourhood Development Plan has been created to deliver modest growth within the Parish. Whilst it is accepted that development for the most part is not easily reversed, especially when on agricultural or other greenfield sites, the modest scale of development promoted in the locality means there is unlikely to be a significant environmental effect.
the cumulative nature of the effects	No	The Broughton and Dalby Neighbourhood Development Plan has been created to deliver modest growth in the Parish. No significant environmental effects are anticipated from growth of this level.
the transboundary nature of the effects	No	This plan is localised to the Parish of Broughton and Dalby and whilst there will be some effects on Neighbouring Parishes, these are considered to be minor given the modest scale of growth as suggested over the Plan Period.
the risks to human health or the environment (e.g. due to accidents)	No	Whilst there is a perception that increased levels of development can have an adverse effect on human health and the environment, through reasoning such as increased car journeys increasing the chances of an accident and pollution from

		increased development, this is only likely to be the case with largescale development. The modest scale of development as suggested in the Broughton and Dalby Neighbourhood Development Plan is unlikely to have a significant environmental effect on either the risks to human health or the environment.
the magnitude and spatial extent of the effects (geographical area and size of the population likely to be affected)	No	This plan is localised to the Parish of Broughton and Dalby and contains only modest development proposals. Whilst there will be some effects on Neighbouring parishes, yet these are considered to be minor given the modest scale of growth as suggested over the plan period.
the value and vulnerability of the area likely to be affected due to: (i) special natural characteristics or cultural heritage; (ii) exceeded environmental quality standards or limit values (iii) intensive land-use	No	Broughton and Dalby Parish contains a number of Environmental and Heritage assets. The Parish contains no SSI's, however the parish does contain 20 validated Local Wildlife Sites (LWS), together with a number of potential and candidate LWSs, as recorded by Phase 1 Habitat Surveys (2005-16).
		Old Dalby contains a conservation area, but the Neighbourhood Development Plan does allocate housing, only a reserve site, but this is located some distance away from the conservation area. Likewise the neighbourhood plan does not promote development in an area at risk of flooding.
		The Neighbourhood Development Plan also looks at opportunities to improve

		environmental features which must be weighed into the planning balance. Overall the Neighbourhood Development Plan as suggested will have limited impacts on the criterion as listed and certainly not significant.
the effects on areas or landscapes which have a recognised national, Community or international protection status	No	No nationally or internationally protected landscapes in or in the setting of the Parish.

Part E – Summary of Environmental Effects

(Provide a summary of the significant environmental effects of the PP)

- 1) The Broughton and Dalby Neighbourhood Development Plan allocates no sites, only one reserve site which will only be brought forward in a certain set of circumstances. This site is located adjacent to a large industrial park. Should this site come forward, there would still be the appropriate checks through any planning application to ensure the development of the site was appropriate in environmental terms.
- 2) The Neighbourhood Development Plan looks to protect a number of locations known to have environmental, social and historical significance and more generally protect the natural environment through a number of Policies. These are likely to have a positive impact.

Overall it is considered that the Broughton and Dalby Neighbourhood Development Plan will have a limited effect on the environment and will **not** have significant environmental effects, contributing to promoting sustainable development in the Parish.

Part F - Screening Outcome

	lations, 2010 (Legal Notice 497 of 2010). It is our view that:
	An SEA is required because the PP falls under the scope of Regulation 4(3) of the Regulations and is likely to have significant environmental effects
	An SEA is required because the PP falls under the scope of Regulation 4(4) of the Regulations and is likely to have significant environmental effects
X	An SEA is not required because the PP is unlikely to have significant environmental effects.

Part G – Consultee Response to Screening Report.

Historic England, Natural England and the Environment Agency all responded to this Report and agreed with the reports conclusions that a full SEA was not required.

HRA

Introduction

HRA screening is split into three stages, the first of which, like SEA is the screening stage. Again like SEA, the screening stage is to firstly establish if there are any likely significant effects possible as a result of the implementation of the plan. The screening process focusses around Natura 2000 sites, which are internationally protected wildlife sites.

The Neighbourhood Development Plan sets the local planning policy framework for Broughton and Dalby Parish. When the Plan is 'adopted' by the local planning authority, it will become part of the Development Plan for Melton Borough and be used for the deciding of Planning Applications in the Parish, and in due course will be joined by the Melton Local Plan. Whilst the Neighbourhood Development Plan has been completed in advance of the Melton Local Plan, communications between the Council and the Neighbourhood Development Plan Group have ensured that the Neighbourhood Development Plan has been completed in general conformity with the emerging strategic policies in the Melton Local Plan.

This report concludes, having regard to the location, nature and scale of the Broughton and Dalby Neighbourhood Development Plan, it is considered that the policies in the Plan will **not** have significant environmental effects on any Natura 2000 sites. The rationale behind this conclusion is contained in the remainder of this report.

Relevant Natura 2000 Sites

There are no Natura 2000 sites within 20km of the Parish Boundary. Rutland Water Special Protection Area (SPA)/RAMSAR is the nearest international designated site to the Broughton and Dalby Neighbourhood Development Plan boundary (22.5km to Parish Boundary). Due to the modest scale of development promoted and the distance to Rutland water, this screening report concludes that there will be no significant impacts on Rutland Water or other Natura 2000 sites.

Rutland Water is a man made pump storage reservoir created by the damming of the Gwash Valley in 1975 and is the largest reservoir in the United Kingdom. In general the reservoir is drawn down in the summer and filled during the autumn and winter months when river levels are high. The main habitats are open water and a mosaic of lagoons, reedswamp, marsh, old meadows, scrub and woodland. The lagoons are one of the most important areas for wintering wildfowl.

SPA	Qualifies under Atricle 4.2 by supporting populations of
	European importance of the following migratory species over winter:
	- Shoveler Anas clypeata
	- Teal Anas crecca*
	- Wigeon Anas Penelope*
	- Gadwall Anas strepera
	- Tufted Duck Aythya fuligula*
	- Goldeneye Bucephala clangula*
	- Mute Swan Cygnus atra*
	- Goosander Mergus merganser*
	- Great Creased Grebe Podiceps cristatus*
	Qualifies under Article 4.2 by regularly supporting at
	least
	20,000 waterfowl.
	* Species that may be removed following the SPA Review *Stroud et
D 4 1 4 0 4 D	al, 2001; The UK SPA network: its scope and content, JNCC)
RAMSAR	R RAMSAR criterion 5 – Assemblages of international
	importance
	Species with peak counts in winter:
	- 19274 waterfowl (5 year peak mean 1998-99 –
	2002/2003) RAMSAR evitorion 6 Species/populations acquiring at
	RAMSAR criterion 6 – Species/populations occurring at levels
	of international importance
	Qualifying Species:
	- Gadwall Anas strepera
	- Northern shoveler Anas clypeata
	- Northern shoveler Arias Gypeata

This site has been assessed for HRA in the Rutland County Council Core Strategy and Site Allocations and Policies Document (the District the site is within), as well as the Uppingham Neighbourhood Development Plan which was made in 2016. The Screening Report for the latter, which was negatively screened, can be found at: http://media.freeola.com/other/28083/sa-sea-hrascreeningreport-2.pdf.

The following is an assessment of Rutland Water from the aforementioned HRA screening

"The sensitivities and vulnerabilities of the site have been identified in HRA assessments for Rutland County Council's Core Strategy and Site Allocations and Policies. It is identified that the most noticeable species are the populations of gadwall and shoveler (it is likely that all other species will be removed from the site citation (other than as Assemblage species) by the SPA Review, when adopted). Data on the use of the site by these species indicate that gadwall and shoveler numbers peak in the autumn, generally around September/October,

before declining over the winter period. This suggests that Rutland is mainly used as a refuge whilst species are moulting in early autumn, before dispersing from the site to other wintering areas as winter progresses. During the winter, gadwall and shoveler occupy more extensive open waters of lakes, reservoirs and gravel puts. Threats include disturbance and water pollution. The principle sensitivities and vulnerabilities of Rutland Water therefore include:

- Water Quality. The level of phosphate can vary above the recommended level at certain times of the year. This increases the risk of a shift in the trophic status of the water body to an algae dominated system, which would adversely affect the site;
- Water level. The water level is linked to abstraction and affects accessible
- aquatic plants are for wildfowl feeding on the site. The ecological perturbation that frequent lowering and raising of water levels causes could be an important factor in whether or not a switch in trophic status occurs.
- Recreation. Management of the trout fishery has caused some debate over potential effects on site ecology. In addition, water sports such as sailing have the potential to affect the site through disturbance. Casual recreation around the site margins may also affect some interest features. The site and the interest features are most likely to be vulnerable to disturbance during the key autumn period." (Uppingham SEA and HRA Screening Report, May 2013).

Impacts as a result of the plan

The Broughton and Dalby Neighbourhood Development Plan, whilst a document that delivers a reserve housing site, is limited in its scale and proposes modest development over a 20 year period. This growth, will have a limited effect on local wildlife populations, and it is too distant and modest to effect the Natura 2000 site in any demonstrable way.

The conclusion of this report therefore is that there is likely to be no demonstrable impact on Rutland Water at all, nor any other Natura 2000 site and as such there is no likely significant impact on Rutland Water or any other Natura 2000 sites. Therefore a full HRA assessment will not be required.

Consultee Responses

The Environment Agency and Natural England confirmed they agreed with the conclusions of the report that a full HRA was not required.
